ABSTRACT

The research study's purpose is to know how introvert young learners use the significant rise of the digital society during the COVID-19 pandemic to communicate verbally with their peers confidently. The researchers aimed to realize how these social media applications helped these timid students build their relationships with other people as technology further advances in multiple communication applications. The thesis used the phenomenological qualitative research design to understand the nature of the introverts amidst the current rise of the digital world. By using this specific research design, the researchers then came to understand the nature of the participants' perspectives in their social life and as to how social media greatly influenced their lives during the current situation. The research study revealed that the rise of usage of social media applications has become during the pandemic influenced these introvert young learners amazingly. Additionally, the research paper also attained information on the perspective of these introvert students when it comes to using the internet to communicate verbally with their peers, how they are able to control their interactions using or in social media, as well as how social media, as a whole, helps in dealing with their shy characteristics. Finally, the study highlights the advantage of using the popular communicative applications as a medium to talk with others.
