### **ABSTRACT**

Now-a-days electricians in the industries are just contented of their skills and knowledge they have learned through experiences and they are seeking updates for the electrical as well as maintenance developments. Thus, this research project conducted an investigation on the skills-transfer and job prospects of practical electricity graduate students in Western Mindanao State University, Department of Extension Services and Community Development who are working in commercials, industrials, and constructions industries within the country and in abroad to which they are affected by the updates of electrical development. The research surveys as instruments of the study were employed to obtain responses on how the license electrical professionals reaching them out for skills transfer and how they aid in speeding up the job prospects as part of their needs. The research findings revealed that the needs of electrical updates and development were very essential to the respondents that affects the job prospects. They responded to this shortcoming by joining webinars or online lectures hosted Electrical professionals of different chapters in a professional electrical organization like Institute of Integrated Electrical Engineers of the Philippines. As a result, that Professional Electrical Organizations support the updates and development by allowing them to join monthly webinars. This study is important to guide electricians to gain skills transfer, which has a greater role on their job prospects by providing constant seminars, technical lectures in their field of electrical works.
