Abstract

This research paper investigates the multifaceted implications of children's use of technology and social media in contemporary society. The study delves into the cognitive, social, and psychological aspects of children's digital interactions, examining the potential benefits and risks associated with their exposure. Through a synthesis of existing literature and empirical research, the paper aims to provide a nuanced understanding of how technology and social media shape children's development, relationships, and overall well-being. Special attention is given to the role of parents, educators, and policymakers in navigating this evolving landscape to promote positive outcomes for the younger generation in the digital era.
